Abstract

The Tempe Industry in Negara Ratu Village is a household-scale industrial business that processes soybeans into tempe which has been carried out by the tempe industry players for more than 10 years and has a production capacity of more than 50 kg of soybeans with a production system of 25 times month, so almost every day doing tempeh production. The tempe industry in Negara Ratu Village has its own advantages, namely the place of production is self-owned, namely the home of the tempe industry players, does not rent a place of production and uses family labor, this tempe industrial production site also allows consumers to see the production process directly. The problem faced by the household-scale tempe industry is that soybean prices continue to fluctuate, the weather during the rainy season makes the fermentation process take longer than usual so that the targeted time for soybeans to become tempeh is getting longer, besides that in the rainy season it requires additional giving yeast so that the fermentation process does not run slowly, and still uses simple equipment. The purpose of this paper is (1) to explain the tempe production process in the household-scale tempe industry in Negara Ratu Village. (2) Analyzing the value of income and revenue in the tempe industry in Negara Ratu Village.

The results of the analysis of the income and revenue of the household-scale tempe industry in Negara Ratu Village obtained an income of Rp. 2,552,535/month while the income was Rp. 7,191,535/month, R/C was obtained 1.52 which means this business is feasible to run and B /C 0.51 means that the household scale tempe industry business in Negara Ratu Village is profitable.
