Abstract

Microalgae are single cell organisms that have the potential to be developed as feedstock for biodiesel oil. One of the problems of using microalgae as feedstock for biodiesel is in the extraction process. Microalgae extraction requires considerable cost. The purpose of this study was to determine the effect of ohmic heating as a method of pretreatment in microalgae oil extraction. The raw materials used were microalgae paste diluted in two levels cell density, 20 g/L, and 30 g/L. The pretreatment using alternating current (AC) electric with two voltage levels (55 V and 110 V), and the duration of pretreatment was 30 seconds and 60 seconds. The next step was drying and extracting microalgae

Dear Author Sir/Madam,

Regarding your article ID: 11716.

From 3 reviewers assigned none responded. We need minimum 2 quality reviews before we can return the article to author for correction. Its either introduce new reviewers (pHD level at least, KNOWN ACTIVE reviewing articles and from a Professional Organisation/University) or you can withdraw your article and submit to other reputable journals. (The progress of article very much rely on the speed of the reviewers). We really honour any decisions of yours.
